Stanley Balakai

Software Engineer

RELEVANT EXPERIENCE & PROJECTS

CANADA DISTRIBUTION CENTRES

Contract Software Engineer

Dec 2022 - Mar 2023

- Developed a responsive web app that functioned as a marketing tool to attract new customers utilizing Next.js, Tailwind CSS, and TypeScript
- Implemented features such as a secure contact form using reCAPTCHA integration, decreasing spam inquiries by 100%
- Improved customer engagement by designing a modern, mobile-first user interface, resulting in a 15% increase in customer inquiries

WILLOW SPRINGS WINERY

Contract Software Engineer

Jun 2022 - Dec 2022

- Collaborated with a cross-function team to redesign a more user friendly e-commerce site using CSS3, Javascript, ReactJS, and Square APIs
- Built a wine club subscription feature enabling over 250 monthly customers to sign-up, select product options, process payment, and manage their account. This feature generated over \$15,000 of profit per month.
- Utilized a tech stack consisting of React, Node.js, MySQL, and AWS while continually gathering user feedback to improve and attract new customers
- Developed a QR code and webpage solution for customers to access detailed wine information during tastings.

PLANTED

Personal Project

Mar 2023 - Present

- Created Planted, a social networking platform that allows users to post and share pictures of their plants and document their growing process
- Developed the app using React, Node.js, and MongoDB, implementing user authentication and secure data storage to ensure privacy and security
- Designed a user friendly interface allowing dynamic search, filtering, likes and comments, to enable users to discover new plants and growing tips

3D World

General Assembly Project

Apr 2022

- Led a team of four in a sprint design and development process of a fullstack 3D model rendering platform using Django, Python, and postgreSQL
- Implemented Sketchfab APIs that allowed users to upload their models to AWS S3 and render their models quickly and efficiently

Mood Boost

General Assembly Project

Apr 2022 - Apr 2022

- Created a MERN single-page app that encourages users to monitor their daily mood, fostering self-awareness and promoting mental well-being
- Implemented token-based authentication by creating custom APIs that allow CRUD operations
